

## LakeNavigator 3.0 Help – Navigation

LakeNavigator 3.0 functions similar to many other online map viewers. To zoom in and out, you can use the wheel on your mouse. Pushing it forward zooms you in and pulling it back zooms you out. You can also zoom in by double-clicking on the map. You can pan or move around by simply clicking and dragging the map.

There are also tools in the upper left corner of the map to assist navigation.

**Zoom In**

**Zoom Out**

**Default Extent**

**My Location (if allowed)**
