

Lake County GIS Department LakeNavigator 3.0 Help – Select Tool

Description: This tool in the upper right header toolbar allows you to select features to run various other tools and operations on.

Function: When the tool window is opened, certain layers are automatically ready for selection. These include the 'Parcels' and 'Road Centerlines'. There are a number of options for selecting features that can be seen by clicking the down arrow on the green 'Select' button. You can select by point, rectangle, polygon, circle, line, and lasso. You can also select non-adjacent or non-contiguous features by using the shift key to add to your current selection. As you select features, the number of features selected for each layer that you have made selectable will appear in the list. Clicking on the ellipsis (3 dots) next to the layer will show the operations you can perform on the selection. See the image below for available choices. This is a useful to to make subsets of data or select features to be used by other tools like the 'Buffer' tool.

To get more help with this tool, see ESRI's help page for the 'Select' widget: https://doc.arcgis.com/en/web-appbuilder/create-apps/widget-select.htm#ESRI_SECTION1_037E2A1D92164041AA5158D86F287FAA
